# NCL

Supply Chain Attack Surface Protection.

Do you know the size of your attack surface and everything present on it? More to the point, do you know where vulnerabilities lie beyond your company boundaries?
You may have your house in order, but do all of your suppliers?

Identify vulnerabilities across your supply chain before the hackers do...

Requiring only your high-level domain (yourcompany.com) or IP addresses, our Supply Chain Attack Surface Protection Service discovers and enumerates your online infrastructure and assets. It accurately identifies components and risks to build a complete picture of your whole attack surface, extending beyond the boudaries of your own network. The analysis behind this service uses non-intrusive (passive) techniques, making it ideal for scanning your supply chain to discover your third party risk.

Uncover the Unknown

By identifying the scale of your attack surface, you can find out exactly where the problems within your infrastructure lie and get to work on remediating these issues. We've partnered with FractalScan to provide the supporting technology for this service.

FractalScan Surface
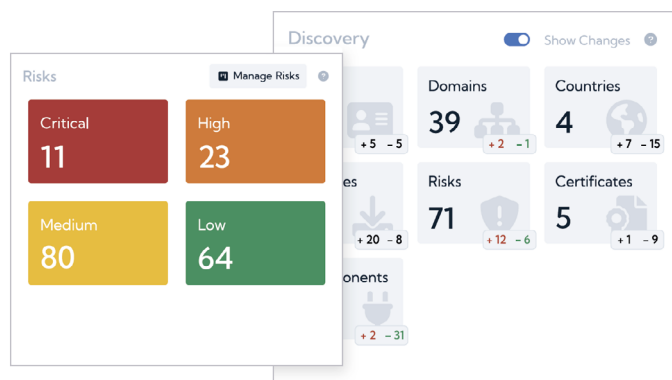

## Explore the Data in Detail

With Supply Chain Attack Surface Protection from NCL, you can deep dive into the data and identify where the issues are present within your infrastructure as well as what's causing them. You can also identify other areas within your systems that are affected.
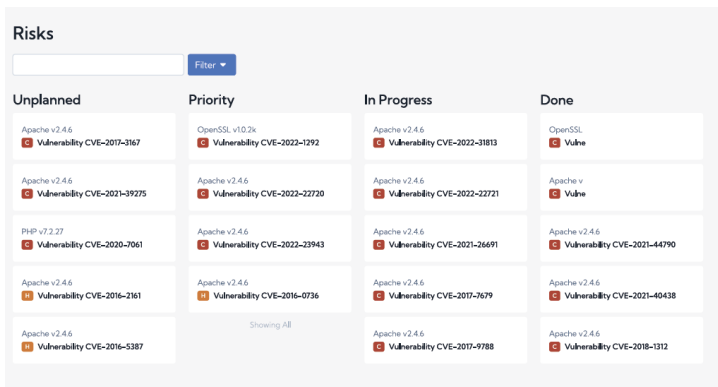

Understand Your Risks

With Supply Chain Attack Surface Protection from NCL, you can deep dive into the data and identify where the issues are present within your infrastructure as well as what's causing them. You can also identify other areas within your systems that are affected.

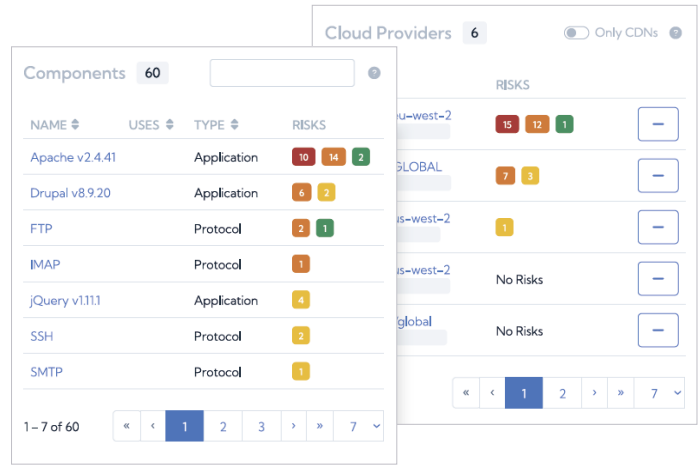

Prioritise Your Risks

Our scoring system allows you to prioritise the areas posing the greatest risk to your cyber security. The built in Kanban board allows you to prioritise these risks and assign it to members of your team.

Continuously Monitor for New Threats

Supply Chain Attack Surface Protection from NCL offers you peace of mind by continuously scanning your infrastructure. Your scan will be refreshed every 24 hours, picking up any new vulnerabilities discovered that day.

Share Your Findings
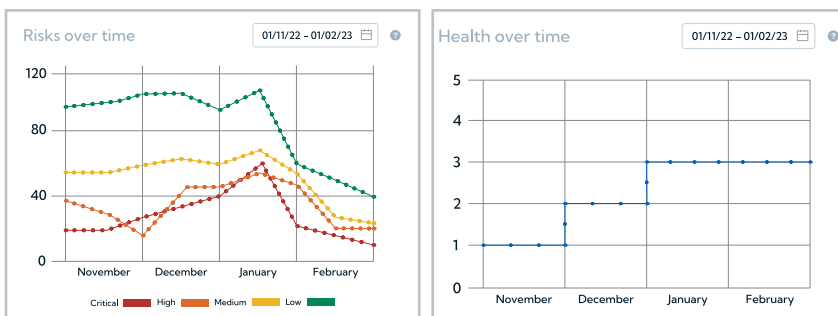

The service also allows you to export a summary of any scan as a PDF, with the data from the scan condensed into key headlines. It will send you an email when your report is ready to download.
