Service Catalogue:

# Firewall **Services**

Having a **Managed** or **Activate** firewall in your business is like having a trusted guardian for your digital space. It's crucial because it keeps out the most threatening of cyber threats by polishing up your access and control with our proficient round-the-clock next-generation functionalities.

With our expert touch, you're not just safe – you're empowered to focus on what you do best, while we handle the cyber-watch.

Your business deserves the best defence, and that's exactly what our firewall services deliver.

NCL

DRIVING DIGITAL VIGILANCE

# Ensure your business resilience and safeguard against hacks with our robust and pragmatic **Firewall Services.**

## Firewall **Replacement**

---

There is the assumption that devices that just keep functioning are doing a good job. With firewalls, however, threats and attack techniques are constantly evolving. The technology has had to evolve to keep pace. Your current protection devices may not be as up to date as you need to remain secure. NCL can help with bringing you up to date with the latest state of the art protection technology.

### How it works

- We start by reviewing your existing firewall rule base.
- We'll then discuss business goals and projects to determine future requirements
- We'll also discover the range of protections offered and resiliency required
- At that point, we'll build a new configuration...
- ...which we'll then implement & test
- Finally, we'll check-in at set intervals to make sure you are making the most of the solution.

## Firewall **Implementation**

---

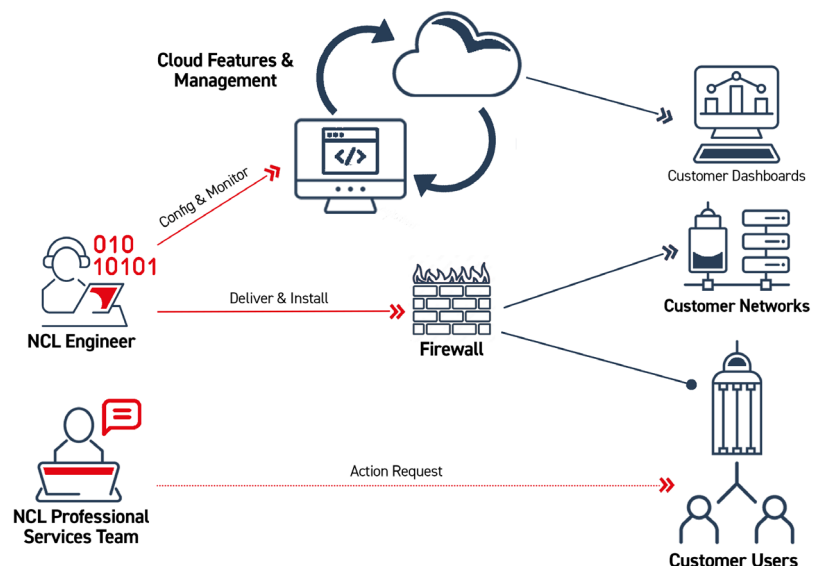

Cyber threats and attack techniques are constantly evolving. Firewall technology has had to evolve to keep pace. NCL can implement the latest state of the art firewall protection you need to remain secure. NCL will assess your applications, user access and business goals to create a configuration suited to your requirements.

### How it works

- We'll kick-off by discussing user locations, applications and usage patterns with you
- After that, we'll discuss business goals and projects to determine future requirements
- Lastly, we'll discuss the range of protections offered and resiliency required
- Once that's all done, we'll build a configuration...
- ...which we'll then implement & test
- Finally, we'll check-in at set intervals to make sure you are making the most of the solution.

## Service Architecture for Firewall **Replacement** & Firewall **Implementation**

---

## Firewall **Support & Managed**

---

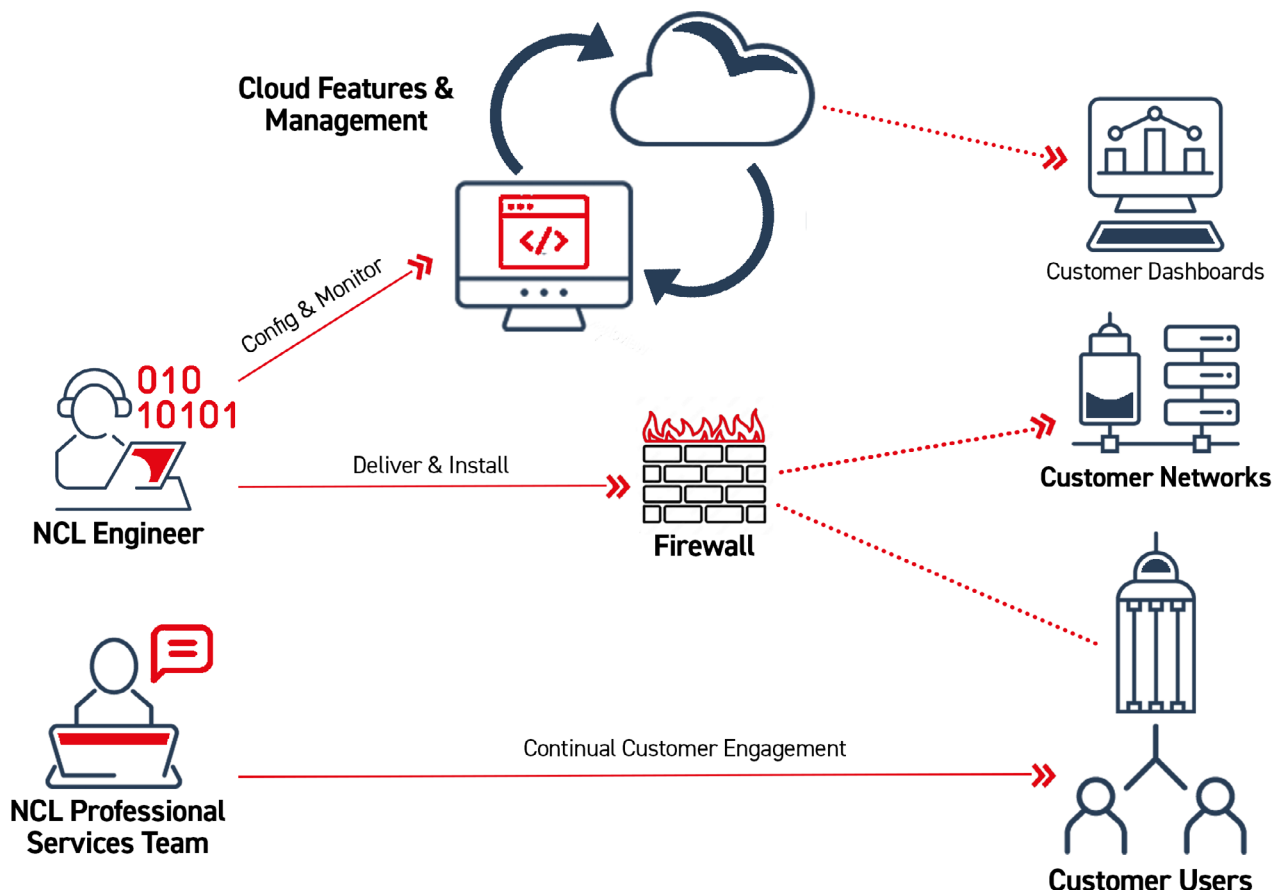

Similar to both our Firewall Replacement and Firewall Implementation services, we will perform planned configuration moves / additions / changes to reflect application services and user adjustments. We'll also update protection definitions regularly. Every quarter we'll produce a report on firewall activity and suggest potential improvements. Finally, we'll update firmware on a pre-planned basis. We're also available to undertake specific, separately costed, projects to address emerging business requirements.

### How it works

- We start by reviewing your existing firewall rule base.
- We'll then discuss business goals and projects to determine future requirements
- We'll also discover the range of protections offered and resiliency required
- At that point, we'll build a new configuration...
- ...which we'll then implement & test
- Finally, we'll check-in at set intervals to make sure you are making the most of the solution.

## Service Architecture for Firewall **Support & Managed**
