Service Catalogue:

Secure Application, Branch & Cloud Access

Let us handle the implementation and transition of Secure Access Cloud technologies, ensuring a smooth integration with your existing architectures and services, including WANs, identity providers, SaaS apps, and multi-cloud solutions.

We'll schedule engagements to address your requests, promptly respond to incidents, perform necessary maintenance, and conduct any required one-off activities. Your network and cloud security success is our top priority.

NCL DRIVING DIGITAL VIGILANCE

Secure Application, Branch & Cloud
Access

Elevate your security posture to new heights with our cutting-edge solution that simplifies your network and supercharges performance, while fortifying security. Seamlessly merge your network traffic and cloud security frameworks to effortlessly clarify and streamline your network operations.

Activate vs Managed

Activate

We understand the critical needs of enterprises looking to streamline user application access, manage network traffic efficiently, and enhance security frameworks within a unified, secure platform. Our goal is to provide you with a central, secure solution for managing your business services.

Our platform empowers you with complete control over branch network access, as well as the ability to deliver SaaS or on-premise applications to users, regardless of their location. The best part is that you won't have to grapple with the complexities of configuring multiple firewalls and network components.

We take pride in our ability to scope, design, and implement Secure Access technologies seamlessly. We integrate these solutions with your existing architectures and services, whether it's for your branch offices, identity providers, or on-premise and SaaS applications. Rest assured, we're committed to providing ongoing support and guidance to ensure that your solution is configured in alignment with your specific business requirements. Your success is our priority, and we're here to assist you every step of the way.

- Collate customer requirements and business drivers
- Scope and implement the solution
- Provide a baseline configuration
- Test the solution
- Handover to customer staff
- Check-in at set intervals to make sure you're making the most of the solution

Managed

Experiencing inefficient business service management? Look no further. Our platform seamlessly converges user application access, network traffic management, and security frameworks into a centralised secure platform for you to achieve your optimal productivity.

Empowering you with comprehensive control to effortlessly deliver branch network access, SaaS or on-premise applications to users, no matter where they are in the world. Say goodbye to suffering the headache of configuring multiple complex network components. Start supercharging your resources by shifting the scrutiny of bandwidth, firewall, and intrusion prevention systems to a private cloud instance. We pride ourselves on slashing costs and elevating efficiency.

We scope, design and implement Secure Access technologies tailored to your needs. Whether it's your branch offices, identity providers, or on-premise and SaaS apps, we integrate everything seamlessly with your architecture and services.

Once it's all set up, NCL takes the helm, maintaining your system and keeping it updated in harmony with your evolving business requirements. We're not just a point-solution; we're your trusted advisor, ensuring that our service continues to provide you with everything you need.
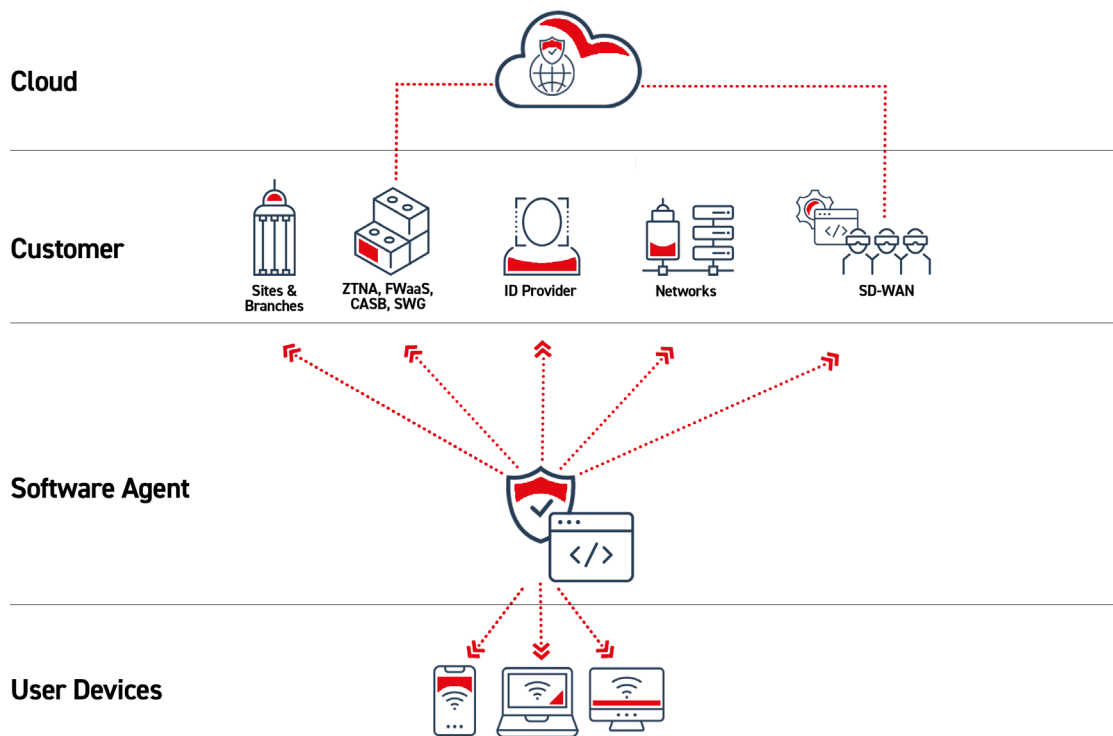

- Collate customer requirements and business drivers
- Scope and implement the solution
- Provide a baseline configuration
- Test the solution
- Perform planned configuration moves/ adds/ changes to reflect user-to-application mapping and control
- Produce a quarterly report on activity and suggest potential improvements
- Update software on an agreed, planned basis
- Undertake specific, separately costed, projects to address emerging business requirements
- Update software on an agreed, planned basis

Service Architecture

Sitting at both the Activate and Managed levels, our secure application, branch and cloud access services are based on the following components:

- WAN links
- Software agents deployed to devices
- Integration with customers ID providers and networks
- Cloud technologies and frameworks (ZTNA, cloud based virtual appliances, FWaaS, SWG, CASB)

Cloud

Customer

Sites & Branches   ZTNA, FWaaS, CASB, SWG   ID Provider   Networks   SD-WAN

User Devices

Service value tailored to your needs

- Accelerates user-to-application service and user-to-office access, enabling staff to achieve peak productivity more swiftly, enhancing operational efficiency.

- Minimises the need for cross-team assistance and simplifies security procedures, optimising staff utilisation by reducing time spent on operational overhead and change management.

- Provides concrete evidence of access control for compliance requirements, such as Cyber Essentials+ or ISO 27001 certifications, facilitating market expansion and attracting new customers

- Safeguards users and data within open/shared network environments, effectively mitigating the vulnerabilities associated with potentially insecure home or public networks.

- Directs relevant user traffic directly to a secure cloud environment, leading to substantial savings on office bandwidth, firewall licensing, and VPN hardware costs.

- Empowers precise control and enforcement of user access to application services, enabling the seamless pursuit of 'zero trust' initiatives.

- Facilitates rapid, cost effective scalability at cloud level, ensuring the organisation can quickly accommodate increased staff numbers without the need for additional office equipment purchases.

- Offers outsourced solution management and access to skilled engineers for support, eliminating the need to hire or train dedicated staff, thereby streamlining operations.

Optional add-ons

Additional call-off time for project or ongoing implementation is possible for the following:

- In-cloud next-generation firewall (NGFW) capabilities
- In-cloud intrusion detection
- In-cloud intrusion prevention
- Network enhancement/ rationalisation
- NCL PS Team engagement for any other work activity

We're happy to discuss your specific situation, understand your challenges and advise on the best ways of strengthening your security and performance needs. Start maximising your business value today by getting in touch.

Net Consulting gave us peace of mind implementing a new state-of-the-art network to overhaul our security transformation.
